Dear Pest Control Specialists

**Re: Testimonial of Exterra termite management system Orapa House**

Pest Control Specialist have successfully implemented an ADVANCED TERMITE MANAGEMENT SYSTEM in gaining full control of a very serious termite attack on the ORAPA HOUSE HIGH RISE BUILDING, that falls under The Office of The President. Noord Suid is responsible for the maintenance of the above building. We contracted Pest Control Specialists in March 2016 to implement the EXTERRAA Termite Management System for Orapa House. This was at a time when a serious termite attack was causing considerable damage to several parts of the building.

As soon as the termite baiting system was implemented the termites commenced feeding on the bait stations and immediately stopped causing any further damage to the interiors of the building. Multiple termite colonies attacking the building have been eliminated. Any future colonies that may wish to advance on this building will also be intercepted by this very effective advanced baiting system.

In our 15 years in the Maintenance and construction industry we have never observed a system as effective as Exterra. It is especially of value for buildings with costly cladding, complicated foundations, basements etc. as the traditional drill and inject method are often ineffective in such cases and poses a risk of considerable damage to costly finishing of high value buildings. It has a very environmentally safe approach.

Yours Faithfully

**ANDREW SEYMOUR**

Director
